

MOMENTUM ACTIVE ACCELERATORS

FROM NCS PARTNERS

As Gold Level Manhattan Experts, our customized nutan ACTIVE Accelerators & Automated Testing Tools are purpose-built to support Manhattan Active Migrations.

Manhattan Active Solutions promise to be always current, seamless interconnected, and continuously adaptive. While these solutions provide a substantial leap forward in sophistication, they represent a departure from typical platforms, often requiring retooling of organization's technology support functions including testing and reporting/analytics. NCS Partners has developed a set of accelerators designed to help organizations rapidly adopt and deploy Manhattan Active Solutions.

Our Active Adapt solution provides a set of pre-built testing automation bots to speed your system and integration testing. These same bots are used to ensure new Manhattan Active releases won't disrupt your production environment. Active Aware provides commonly required extensions to Manhattan Active data and analytics. Our data models, integrations, reports, and dashboards are configurable to your needs, streamlining the process to provide needed analytics to business users.

Active® ADAPT

Automated, modular, continuous testing solutions for Manhattan Active® products. Powered by nutan™ these flexible testing bots can be configured to your specific needs.

Active® AWARE

Configurable data model and schemas coupled with analytic templates extends the data and analytics capabilities of your Manhattan Active® products.

Active® AMPLIFY

Tools & Services that support production deployment of your Manhattan Active® products. Fueled by NCSP experts with over 25+ years of experience in MA supply chain solutions, software development and testing.

READY TO MIGRATE? nutan delivers!

SUCCESSFUL DEPLOYMENTS

Minimal DISRUPTIONS

Automated Solutions

...now that's something to smile about.

Ready to migrate to ACTIVE?

Avoid disruptions with automated testing. Accelerate and improve insights with advanced analytics. Increase operational efficiency with automated processes.
